

신경과학 II (이) (LS306-01)

학기	2025년 2학기
담당교수	오용석
이수구분	교선평수
학점	3.0
강의시간	수09:00-10:30(E7 - 233), 금09:00-10:30(E7 - 233)
강의실	
소속	기초학부

교과개요

This course builds upon foundational neuroscience concepts, delving deeper into the intricate workings of the nervous system. We'll explore topics like sensory perception, motor control, learning and memory, and the biological bases of emotion and cognition. The course will integrate molecular, cellular, and systems-level perspectives to provide a comprehensive understanding of brain function.

교과목표

Students will gain a more detailed understanding of fundamental neuroscience principles and major brain regions' roles in complex behaviors. They'll develop the ability to critically evaluate scientific literature and apply their knowledge to understand neurological disorders. The course aims to foster an appreciation for the interdisciplinary nature of neuroscience and its impact on human health and well-being.

주차별 강의계획

1주차:Course Overview

2주차:Chapter 15 Chemical Control of the Brain and Behavior

3주차:Chapter 16 Motivation

4주차:Chapter 17 Sex and the Brain

5주차:Chapter 18 Brain Mechanisms of Emotion

6주차:Chapter 19 Brain Rhythms and Sleep

7주차:Chapter 20 Language

8주차:Midterm Exam.

9주차:Chapter 20 Language

10주차:Chapter 21 The Resting Brain, Attention, and Consciousness

11주차:Chapter 22 Mental Illness

12주차:Chapter 23 Wiring the Brain

13주차:Chapter 24 Memory Systems

14주차:Chapter 25 Molecular Mechanisms of Learning and Memory

15주차:Chapter 26 Mathematical Approach to Neuro-network

16주차:Final Exam

수업방법

Lecture and Student Presentation on the topics described in the BOX.
