

기계재료학(이,공) (MECH406-01)

학기	2025년 2학기
담당교수	김봉훈
이수구분	교선평수
학점	3.0
강의시간	월15:00-18:00(E7 - G03)
강의실	
소속	기초학부

교과개요

In this course undergraduate students will have the opportunity to learn professional knowledge about the fundamentals of the structure/mechanical properties relationships of various materials such as ceramics, metals, polymers, and composites.

교과목표

(1) Understand the relationship between structure-processing-properties for selection of existing materials and development of new materials in the design of parts, structures, and devices. (2) Understand the microstructure characteristics, mechanical properties, materials formation, and manipulation of microstructure for application in engineering design and materials processing. (3) Understand the relations between the composition, temperature and phase fractions applied to equilibrium phase diagrams for given material systems.

수업방법

강의 (Lecture), 프로젝트 (Project)

학습윤리

No cheating for all the course activities.

교과정책(방침)

Attendance is highly recommended.
