

학습과 기억(이) (BR404-01)

학기	2026년 1학기
담당교수	박포정
이수구분	심화필수
학점	3.0
강의시간	화16:30-18:00(E7 - G01), 목16:30-18:00(E7 - G01)
강의실	E4 215 (교수실)
소속	기초학부

교과개요

This course introduces the molecular, cellular, and circuit-level mechanisms that underlie learning and memory in the nervous system. Emphasis is placed on synaptic plasticity, signal transduction, and the structural and functional changes that encode episodic memory. This course will include: - Surveying the molecular and cellular bases of learning and memory. - Exploring mechanisms of long-term potentiation (LTP), long-term depression (LTD), and other forms of synaptic plasticity. - Understanding how neuromodulators and intracellular signaling pathways regulate memory formation and maintenance. - Discussing systems-level organization of memory circuits and their behavioral correlates in model organisms and humans.

교과목표

This course provides a foundational understanding of how our brain learns and remembers. It focuses on the cellular and molecular mechanisms underlying learning and memory and introduces key experimental approaches across molecular, physiological, behavioral, and optical levels. Students will explore how these methods reveal neural plasticity and memory processes from molecules and synapses to neural circuits and behavior, in both model organisms and humans.

학습윤리

Dishonest academic practices, such as cheating and plagiarism, are unacceptable. Engaging in such behaviors will lead to receiving no points on the exams and will be addressed as per the university's disciplinary standards.

교과정책(방침)

Cell phones should be turned off or set to silent mode during class. No texting or browsing on phones during class. Laptops/tablets should only be used for course-related activities.
