교과개요

General Chemistry I lecture offers an overview of fundamental chemistry topics, including atomic structures, basic concepts of chemical bonding, molecular geometry and bonding theories. Additional topics are covered to further develop chemical knowledge and enhance understanding of fundamental chemical principles.

교과목표

This course is designed to introduce first-year students to the fundamental principles of general chemistry. Students will develop a solid understanding of atomic structure, chemical bonding, stoichiometry, states of matter, and basic chemical equilibrium. Emphasis is placed on building problem-solving skills and the ability to apply chemical concepts to real-world phenomena and more advanced studies in science and engineering.
