

화학 제품 및 공정 설계(공) (CE402-01)

학기	2026년 1학기
담당교수	김찬연
이수구분	교선평수
학점	3.0
강의시간	월14:30-16:00(E7 - G02), 수14:30-16:00(E7 - G02)
강의실	
소속	기초학부

교과개요

The chemical industry is changing rapidly, going beyond traditional chemical process and petrochemical industries to energy/environment, bio, semiconductor/display, etc. Accordingly, it is very important to figure out consumers' needs to generate new ideas, and then to select the best candidate. In this regard, this lecture will help students understand what chemical product is and how a four-step design process (needs, ideas, selection, and manufacture) works. And then, the basic principles of chemical process design are also dealt briefly.

교과목표

1. Understand what kinds of chemical products are being developed and how to design them 2. Understand a four-step design process (needs, ideas, selection, and manufacture) 3. Understand the principles of chemical process design (process (Course Objectives) simulation, process synthesis heuristics, etc.) 4. Learn product design case studies for basic chemicals

학습윤리

Sincerity, Honesty, and Thoughtfulness

교과정책(방침)

Attendance Rule: -1 point for every absence. However, let me know your absence before the class, if you are ill or others. Homework Rule: Please submit your homework before starting the lecture on due date. I will accept delayed homework until the next week, but it will get at most 50% score. Makeup lecture: prefer to extend regular lecture time rather than other days
