교과개요

Physical Chemistry 2 Quantitative and theoretical study of the properties and structure of matter and their relation to the interaction of matter and energy.

교과목표

This course serves as an introduction to chemical thermodynamics, giving you an understanding of basic principles, laws and theories of physical chemistry the are necessary for chemistry. You will develop the ability to solve quantitative problems, and learn to use original thought and logic in the solution of problems and derivation of equations. You will learn to apply mathematics in chemistry in such a way that the equations paint a clear picture of the physical phenomena.
