

컴퓨터구조 (공) (CSE305-01)

학기	2026년 1학기
담당교수	이효근
이수구분	교선평수
학점	3.0
강의시간	화13:00-14:30(E7 - 236), 목13:00-14:30(E7 - 236)
강의실	
소속	기초학부

교과개요

Like skyscrapers, well-architecting a system that incorporates delicate, bleeding-edge technologies is pressing. This lecture covers the basics of computer architecture, including pipeline designs, memory managements, and some issues related to caches (e.g., policies and coherence). There could be two term projects based on an RTL design and an architecture simulator.

교과목표

Clearly understand the concepts of architecture, microarchitecture, memory managements, and cache managements.

주차별 강의계획

- 1주차:Introduction to Computer Architecture
- 2주차:Instruction Set Architecture (1)
- 3주차:Instruction Set Architecture (2)
- 4주차:Single- & Multi-Cycle Microarchitectures
- 5주차:Pipelined Microarchitecture: Introduction
- 6주차:Pipelined Microarchitecture: Data Hazard and its Handling
- 7주차:Pipelined Microarchitecture: Control Hazard and its Handling
- 8주차:Mid-Term Exam
- 9주차:Advanced Microarchitectures
- 10주차:Memory Systems: Cache (1)
- 11주차:Memory Systems: Cache (2)
- 12주차:Memory Systems: Cache (3)
- 13주차:Memory Systems: Virtual Memory (1)
- 14주차:Memory Systems: Virtual Memory (2)
- 15주차:IO Devices and Managements
- 16주차:Final-Term Exam

수업방법

Lecture-based, basically.

학습윤리

F will be given if cheating is caught no matter what the case is.
