

시스템 프로그래밍(공) (CSE306-01)

학기	2026년 1학기
담당교수	이용우
이수구분	교선평수
학점	3.0
강의시간	월16:30-18:00(E7 - 242), 수16:30-18:00(E7 - 242)
강의실	E3 214 (교수실)
소속	기초학부

교과개요

This course provides a programmer's perspective on how computer systems execute programs, store information, and communicate. The curriculum covers data representation, machine-level representation of programs, processor architecture, the memory hierarchy, exceptional control flow, and system-level I/O. By understanding these low-level mechanisms, students will gain the ability to write more efficient, reliable, and secure code.

교과목표

Analyze Machine-Level Code: Understand how C code is translated into assembly and machine code, and use this knowledge to debug and optimize programs. Optimize Memory Performance: Apply knowledge of the memory hierarchy and cache structures to minimize latency and improve data throughput. Manage Processes & Signals: Implement and manage exceptional control flow (ECF), including process creation, signals, and non-local jumps. Develop System-Level Applications: Utilize Unix/Linux system calls for I/O, network programming (client-server architecture), and concurrent programming. Evaluate System Performance: Identify and eliminate performance bottlenecks at the system level through rigorous analysis.

학습윤리

1. Originality of Work All programming assignments (Labs) and examinations must be the result of your own intellectual effort. The primary goal of these assignments is for you to learn the material by doing the work yourself. 2. Prohibited Collaboration Code Sharing: You may not share your source code, nor should you look at the code of any other student (past or present). Internet Resources: Copying solutions from public repositories (e.g., GitHub, StackOverflow) or using AI-generated code (e.g., ChatGPT) to solve specific lab tasks is strictly prohibited. 3. Permissible Discussion You are encouraged to discuss high-level concepts, algorithms, and general debugging strategies with your peers. If you discuss concepts with others, you must acknowledge their contribution in your submission. 4. Consequences of Misconduct Plagiarism and cheating undermine the value of your education. Any confirmed case of academic dishonesty will result in a failing grade (F) for the course.

교과정책(방침)

1. Attendance: follows the university rules. 2. Use of AI Tools : While AI tools (e.g., ChatGPT) can be used for understanding general concepts, copy-and-paste from it is strictly prohibited.
