

컴퓨터보안개론(공) (CSE405-01)

학기	2026년 1학기
담당교수	최원석
이수구분	교선평수
학점	3.0
강의시간	월10:30-12:00(E7 - 224), 수10:30-12:00(E7 - 224)
강의실	
소속	기초학부

교과개요

Aspects of computer security, common attacks, policy formation, and security models. Tools and countermeasures for achieving particular security goals: one-way functions; symmetric- and asymmetric-key cryptography, including block ciphers with key generation and modes of operation; keyed hashes; digital signatures; public-key encryption; and simple key exchange protocols. Introduction to cybersecurity architectures.

교과목표

An understanding of the differences between various requirements of cybersecurity, where they arise as computer and information security, and appropriate tools to achieve them; an appreciation of some common security pitfalls.

학습윤리

Academic Honesty and Ethical behavior are required in this course, as it is in all courses at DGIST.
