교과개요

This course is an introductory accounting course for undergraduate engineering and science students who have little or no background in accounting.

Rather than focusing on complex accounting rules or journal entries, the course starts with how to read and understand financial statements. Students will learn how to see the big picture of how companies earn money and how money is used.

Through company-based case studies, such as Apple, NVIDIA, Samsung Electronics, and well-known startup companies, students will learn how accounting information explains real business activities. These company cases help students see how financial statements reflect actual business decisions, growth strategies, risks and performance.

After graduation, students may face situations such as developing startup ideas, managing projects, or analyzing companies. This course prepares students for those practical situations by linking accounting concepts to real decision-making.

Upon successful completion of this course, students will be able to understand accounting information, see the financial situation of an organization, and use that information to make better decisions.

교과목표

The ability to understand and interpret accounting information is an essential skill for everyone, regardless of major. This includes entrepreneurs, managers, engineers, researchers, and other professionals.

The main goal of this course is to help students learn how to see the organization using numbers through accounting. Students will also practice AI-based financial analysis and learn how to critically understand and use the results, rather than accepting them blindly.

Through these experiences, students are expected to develop data-driven decision-making (DDDM) skills. Even as non-accounting majors, students will learn how to explain and persuade others using accounting information and data.

학습윤리

All assignments, exams, and presentations must be completed through each student's own honest effort. Active participation in team projects is required.

Academic misconduct such as plagiarism, ghostwriting, or cheating will be handled strictly. If misconduct is found, the related assessment will receive an F (zero score).

교과정책(방침)

- Mobile phone use is restricted during class to maintain focus.
- During exams, basic calculators are allowed, but any device with communication functions is prohibited.

- Attendance counts toward the final grade. Two late arrivals are counted as one absence.
- All assignments must be submitted by the stated deadlines.
