

로봇동역학 및 제어 (공) (MECH401-01)

학기	2026년 1학기
담당교수	황민호
이수구분	교선평수
학점	3.0
강의시간	화10:30-12:00(E7 - G01), 목10:30-12:00(E7 - G01)
강의실	
소속	기초학부

교과개요

The course gives a thorough understanding of the kinematics, dynamics, mechanism design, and motion control of robot manipulators. Students will develop proficiency in using homogeneous transformation for complex kinematic structures, in analyzing forward and inverse dynamics of linked mechanisms, and developing motion control techniques for machines. The course covers practical issues of the manipulators in various applications such as medical robots, industrial robots, machine tool, etc. The course will conclude with practical applications, emerging topics, and future directions in robotics.

교과목표

The course gives a thorough understanding of the kinematics, dynamics, mechanism design, and motion control of robot manipulators.
