

전산물리(이) (PHY406-01)

학기	2026년 1학기
담당교수	강준구
이수구분	교선평수
학점	3.0
강의시간	화14:30-16:00(E7 - 229), 목14:30-16:00(E7 - 229)
강의실	E2 308 (강준구 교수)
소속	기초학부

교과개요

In the field of physics, research is broadly categorized into experimental, theoretical, and computational physics. Computational physics provides valuable tools for interpreting experimental data and formulating new physical theories. The recent advent of machine learning and a significant increase in computing power are expected to bring about a paradigm shift across the entire methodology of physics research. This course focuses on learning the fundamental theories needed to simulate physical phenomena on a computer and developing the ability to write programs accordingly.

교과목표

Develop fluency in Python for scientific computing.
Learn fundamental algorithms for simulating physical systems.
Gain practical experience in data analysis and visualization.

수업방법

Lecture and experiment.

학습윤리

No cheating, no plagiarism, no fabrication

준비물 및 기타

Laptops: Required for all sessions to access Google Colab.
