

회로이론과 계측법(실습) (BE206-01)

학기	2026년 2학기
담당교수	송민영
이수구분	교선평수
학점	1.0
강의시간	금14:00-16:00(E2 - 221)
강의실	
소속	기초학부

교과개요

Students will gain hands-on experience in implementing and testing electronic circuits. They will use measurement equipment to build functional circuits on breadboards with passive and active components while developing practical debugging and troubleshooting skills. The final three weeks of the course will be devoted to a creative design project, where students will design, implement, and present a circuit of their own choice.

교과목표

Develop the ability to implement and test basic electronic circuits through hands-on experiments.

학습윤리

Active discussion and collaboration among students are strongly encouraged. However, all reports must be prepared independently. Any plagiarism or unauthorized use of another person's work without proper citation will be considered academic misconduct and may result in a substantial reduction in grade.
