

회로이론과 계측법(실습) (BE206-03)

학기	2026년 2학기
담당교수	윤종혁
이수구분	교선평수
학점	1.0
강의시간	금11:00-13:00(E2 - 221)
강의실	E3 410 (윤종혁 교수)
소속	기초학부

교과개요

In accordance with the progress of the circuit theory and instrumentation (theory) lecture, experiments are conducted to directly implement and test circuits. Using NI-ELVIS, passive and active components are easily placed on the breadboard to create a circuit with the desired function, and the ability to solve practical problems is developed. In addition, by learning the basics of the LabVIEW program, methods for automating data collection are learned. The last three weeks are devoted to a creative experiment opportunity to create a circuit of one's own choice and present it.

교과목표

Developing the ability to actually implement and test basic electronic circuits.

학습윤리

No cheating

교과정책(방침)

Discussion among students is recommended while solving problems
