교과개요

This course focuses on essential experimental techniques in neuroscience, providing hands-on experience in studying brain functions. Students will learn to design and conduct experiments, analyze data, and interpret results related to key biological mechanisms in the brain. The course emphasizes both theoretical understanding and practical skills in neuroscience research.

교과목표

Master basic neuroscience laboratory techniques.

Develop skills in experimental design and data analysis.

Gain a deep understanding of ethical considerations and result interpretation in neuroscience experiments.
