

신경생리학(이) (BR402-01)

학기	2026년 2학기
담당교수	박포정
이수구분	교선평수
학점	3.0
강의시간	화10:30-12:00(E7 - 237), 목10:30-12:00(E7 - 237)
강의실	
소속	기초학부

교과개요

This course explores the molecular, cellular, and circuitry mechanisms that underlie the function of the mammalian nervous system, with special emphasis on the membrane potential, electrical signaling and synaptic organization.

This course will include:

- Surveying the molecular and cellular mechanisms of neuronal communication.
- Conversion channels in excitable membrane, synaptic transmission, and synaptic plasticity.
- Correlation of the properties of ion channels and synaptic transmission with their physiological function such as learning and memory.
- Discussion of the organizational principles for the formation of functional neural networks at synaptic and cellular levels.

교과목표

This class aims to learn basic information about neurobiology of physiological processes or using neurophysiological techniques to understand molecular, cellular, systems or behavioral neuroscience, from model organisms to human subjects.

학습윤리

Dishonest academic practices, such as cheating and plagiarism, are unacceptable. Engaging in such behaviors will lead to receiving no points on the exams and will be addressed as per the university's disciplinary standards.

교과정책(방침)

Laptops/tablets should only be used for course-related activities.
