

다변수 미적분학 (BS101-04)

학기	2026년 2학기
담당교수	Carlos Scarinci
이수구분	공통필수
학점	3.0
강의시간	화13:00-15:00(E7 - L21), 목13:00-15:00(E7 - L21)
강의실	
소속	기초학부

교과개요

In this course we will cover concepts and applications of differentiation and integration of real multivariable functions and vector analysis. Topics will include: elements of Euclidean geometry, limits and continuity of multivariable functions, differentiability, gradients and directional derivatives, higher derivatives, maxima and minima, vector fields, divergence and curl, multiple integrals, path and surface integrals, Green, Stokes and Gauss theorems.

교과목표

After completing this course, the students should have a clear understanding of fundamental concepts of multivariable calculus and the ability to work with them effectively.

수업방법

The course will consist of blackboard lectures, covering material from the textbooks. List of suggested exercises will be also provided for each lecture. The students are encouraged to read the material and work through the exercises before coming class, and to ask related questions during class. The evaluation method will consist of a final exam (40%), a midterm exam (30%), and of homework assignments/quizzes (30%).

학습윤리

Cheating and plagiarism are serious offenses and will not be tolerated. Any student caught plagiarizing or cheating will automatically fail the course. This also applies to students who knowingly allow their work to be copied.

교과정책(방침)

Attendance of the midterm and final exams are mandatory (absence in either exam will result in a failing grade). Make-up exams might be granted upon request, in a case-by-case basis and with appropriate documentation explaining each circumstance.
