### 교과개요

This laboratory course introduces students to fundamental techniques and experimental approaches in biology, reinforcing core concepts through hands-on investigation. Students will conduct experiments in areas such as microscopy, cell biology, enzyme activity, genetics, and molecular biology. Emphasis is placed on developing skills in hypothesis formulation, experimental design, data collection and analysis, and scientific communication. The course complements the associated lecture by providing experiential learning opportunities that highlight the process of scientific inquiry and the application of biological principles in real-world contexts.

### 교과목표

This course aims to develop students' practical skills in experimental biology, including accurate use of laboratory equipment, microscopy, and basic techniques in molecular and cellular biology. Students will learn to formulate testable hypotheses, design and carry out experiments, record observations, analyze quantitative and qualitative data, and interpret results in the context of core biological concepts. The course also emphasizes clear and precise scientific communication through written lab reports and collaborative discussions.

### 학습윤리

Dishonest academic practices, such as cheating and plagiarism, are unacceptable. Engaging in such behaviors will lead to receiving no points on the exams and will be addressed as per the university's disciplinary standards. Wearing shorts or slippers is prohibited during experiments. Violations will negatively impact the evaluation of your experimental conduct and attitude.

### 교과정책(방침)

Laptops/tablets should only be used for course-related activities.
