

일반생물학 I (BS116-01)

학기	2026년 2학기
담당교수	이석규
이수구분	공통필수
학점	3.0
강의시간	수11:00-12:30(E7 - 223), 금11:00-12:30(E7 - 223)
강의실	E4 409 (구재형 교수)
소속	기초학부

교과개요

This course provides an introduction to fundamental biological principles, emphasizing the molecular and cellular basis of life, genetics, evolution, and the structure-function relationships in living organisms. Topics include the chemistry of life, cell structure and function, metabolism, DNA replication and expression, Mendelian and molecular genetics, and evolutionary processes. The course is designed for students pursuing studies in life sciences, medicine, neuroscience or related fields and provides the foundational knowledge required for advanced coursework in biology.

교과목표

This course aims to provide students with a foundational understanding of general biology by exploring the chemical basis of life, cell structure and function, energy metabolism, molecular genetics, and evolution. Students will learn to describe key biological molecules and processes, explain genetic inheritance and gene expression, and analyze the mechanisms driving evolutionary change. Emphasis is placed on developing scientific reasoning skills, interpreting experimental data, and understanding how molecular and cellular processes underlie organismal biology.

학습윤리

Dishonest academic practices, such as cheating and plagiarism, are unacceptable. Engaging in such behaviors will lead to receiving no points on the exams and will be addressed as per the university's disciplinary standards.

교과정책(방침)

Cell phones should be turned off or set to silent mode during class. No texting or browsing on phones during class. Laptops/tablets should only be used for course-related activities.
