

일반생물학 II (BS117-02)

학기	2026년 2학기
담당교수	엄지원
이수구분	기초필수
학점	3.0
강의시간	화09:00-10:30(E7 - 224), 목09:00-10:30(E7 - 224)
강의실	E4 509 (교수실)
소속	기초학부

교과개요

This course provides an integrated introduction to animal and plant biology, evolution, and ecology. Students will learn how animals maintain homeostasis through coordinated physiological systems, how plants grow, reproduce, and respond to their environment, and how evolutionary processes generate biological diversity. The course also examines ecological interactions at the levels of populations, communities, and ecosystems. Emphasis is placed on understanding fundamental biological principles and applying them to real-world biological phenomena.

교과목표

The primary objective of this course is to provide students with a comprehensive understanding of the fundamental principles of animal and plant biology, evolution, and ecology. Students will develop an understanding of how animal physiological systems function to maintain homeostasis, how plants grow, reproduce, and respond to environmental cues, and how evolutionary processes generate and shape biological diversity. The course also aims to introduce the ecological interactions that occur among organisms and between organisms and their environment across multiple levels of biological organization. Through the integration of concepts from physiology, development, evolution, and ecology, students will strengthen their ability to think critically about biological systems and apply scientific reasoning to the analysis of biological phenomena.
