교과개요

General Chemistry II builds upon the fundamental principles introduced in General Chemistry I by examining the behavior of chemical systems in greater depth. Students will explore the properties of solutions, chemical kinetics, chemical equilibrium, acid-base equilibria, thermodynamics, electrochemistry, nuclear chemistry, and the chemistry of nonmetals and transition metals. The course emphasizes the factors that govern chemical reactions, energy transformations, and equilibrium processes, while highlighting applications in environmental, industrial, biological, and technological contexts.

교과목표

This course is designed to deepen students' understanding of chemical principles governing solutions, reaction rates, equilibrium, thermodynamics, electrochemistry, and nuclear chemistry. Emphasis is placed on quantitative problem-solving, critical thinking, and the application of chemical concepts to real-world systems, while preparing students for advanced studies in science and engineering.
