

공학수학II (BS201b-01)

학기	2026년 2학기
담당교수	이두석
이수구분	교선평필수
학점	3.0
강의시간	월10:30-12:00(E7 - L22), 수10:30-12:00(E7 - L22)
강의실	E7 210 (교수실)
소속	기초학부

교과개요

Students will study on the topics in complex variable, Fourier analysis, basics of partial differential equations, and potential theory with computational tool. Topics includes: -Complex analysis: Cauchy-Riemann equation, Analytic functions, Conformal mapping, Complex integrals, Contour integrals, Power series, Laurent series, Residue theorems -Fourier analysis, Fourier and inverse transform, Discrete Fourier transform, Fast Fourier transform -Basics of Partial differential equations -Potential theory

교과목표

Acquisition of mathematical skills useful for solving engineering problems such as applications of Fourier analysis, applications of automatic control and signal processing Acquisition of complex analysis with applications of general solutions of mathematical models

수업방법

PBL with lectures, recitations and matlab practices

학습윤리

- Please pay attention to your words and actions in your relationships with professors, teaching assistants, and colleagues, maintain relationships through communication, and try to be polite to each other. - Believe in your abilities and perform learning activities such as assignments and tests on your own. - Be sure to cite other people's ideas or results.

교과정책(방침)

If you cheat on exams and quizzes, your grade will be F. Assignment: Submission required within the deadline (10% reduction per day for late submission), Submit by yourself (No points for plagiarism once, F for more than two plagiarism) Penalty for disruptive behavior: Use of electronic devices such as cell phones that are not related to class. Sleeping, noise, frequent movement, etc.
