

확률과 통계 및 실습 (BS202a-01)

학기	2026년 2학기
담당교수	Carlos Scarinci
이수구분	공통필수
학점	3.0
강의시간	월13:00-15:00(E7 - L22), 수13:00-15:00(E7 - L22)
강의실	
소속	기초학부

교과개요

This course provides an introduction to probability and statistical inference with an emphasis on fundamental concepts and their mathematical foundations. Topics include probability models, random variables and their distributions, joint and conditional distributions, sampling distributions, estimation, hypothesis testing, and simple linear regression. The course integrates theoretical development with illustrative examples and applications to data.

교과목표

By the end of the course, students should be able to formulate problems in probabilistic terms, apply standard methods of estimation and hypothesis testing, and draw appropriate conclusions from data. The course also aims to strengthen quantitative reasoning and the clear communication of statistical results.

학습윤리

Cheating and plagiarism are serious offenses and will not be tolerated. Any student caught plagiarizing or cheating will automatically fail the course. This also applies to students who knowingly allow their work to be copied.

교과정책(방침)

Attendance of the midterm and final exams are mandatory (absence in either exam will result in a failing grade). Make-up exams might be granted upon request, in a case-by-case basis and with appropriate documentation explaining each circumstance.

준비물 및 기타

Students are expected to have successfully completed Multivariable Calculus (BS101) or an equivalent course. Students must have regular access to a laptop computer for assignments and computational demonstrations as required.
