

무기화학 I (이.공) (CHEM202-01)

학기	2026년 2학기
담당교수	박진희
이수구분	교선평수
학점	3.0
강의시간	월09:00-10:30(E7 - 241), 수09:00-10:30(E7 - 241)
강의실	E2 508 (박진희 교수)
소속	기초학부

교과개요

Fundamental principles of inorganic chemistry such as atomic structure, molecular orbital theory, molecular symmetry, and coordination chemistry related to chemical bonding and molecular geometry will be discussed. A study of the energetics of the bonding and reactions of inorganic compounds will be included. Emphasis will be placed on the periodicity of the chemical and physical properties of the elements. The course also covers key concepts related to the chemistry of the elements such as effective nuclear charge, lattice energy, and electron density.

교과목표

- 1.To understand the fundamental concepts of inorganic chemistry.
- 2.To develop the ability to apply chemical principles to explain and predict the properties and reactivity of inorganic compounds.
- 3.To develop critical thinking and problem-solving skills in chemistry.
