| 강의시간 | 화14:30-16:00(E7 - 241), 목14:30-16:00(E7 - 241) |
| 강의실  | E2 611 (교수실)                                   |
| 소속   | 기초학부                                           |

### 교과개요

This course will provide deeper understanding on organic reactions and mechanisms using molecular orbital theory. Topics includes molecular orbital theory, carbonium ion chemistry, nucleophilic and electrophilic reactions, pericyclic reactions, and kinetics, etc. We may not cover or add some of the subjects in each of the subsequent chapters according to progress. You will be responsible for materials covered in the lecture.

### 교과목표

After this course, students can explain the organic reactions based on molecular orbital theory and understand the basics of physical organic chemistry.

### 학습윤리

A cheating on assignment and exam will result in a diminished grade.

### 교과정책(방침)

Your presence is mandatory for this course. Excuses are expected to have a valid reason (medical, scholar, etc). Frequent absence will result in a diminished grade. Taking lecture notes is highly recommended for this class.
