

고분자화학(이,공) (CHEM406-01)

학기	2026년 2학기
담당교수	홍선기
이수구분	교선평수
학점	3.0
강의시간	수15:00-16:30(E7 - 242), 금15:00-16:30(E7 - 242)
강의실	E2 510 (교수실)
소속	기초학부

교과개요

This course introduces the fundamental principles of polymer chemistry, focusing on how polymeric materials are formed through chemical reactions. Emphasis is placed on understanding polymerization mechanisms and the molecular structure of polymers within the framework of organic chemistry, thereby providing a conceptual understanding of how the structural features of polymers relate to their properties.

교과목표

The objective of this course is to enable students to develop a fundamental understanding of the chemical aspects of polymeric materials. By the end of the course, students should be able to interpret basic polymerization mechanisms, describe the molecular characteristics of polymers, and recognize the fundamental relationships between polymer structure and properties. The course further aims to strengthen students' ability to apply principles of organic chemistry to polymer-forming reactions and to provide a foundation for further study in polymer and materials chemistry.

학습윤리

Students are required to attend at least three-fourths of the lectures to receive credits.

Any instance of plagiarism or other forms of academic dishonesty will result in course failure and may lead to further disciplinary action.

교과정책(방침)

Organic chemistry I and II (CHEM204 & Chem205) are prerequisites.

Using cell phone during class is not allowed.
