이수구분	교선평수
학점	3.0
강의시간	목10:00-13:00(E7 - 242)
강의실	
소속	기초학부

교과개요

As science and technology play an increasingly significant role in shaping contemporary society, it is essential to develop a critical understanding of their nature and impacts. This course aims to cultivate students' ability to examine the characteristics and social implications of modern science and technology from multiple perspectives by introducing major theoretical discussions in Science and Technology Studies (STS), an interdisciplinary field that integrates diverse approaches from the humanities and social sciences. Building on these theoretical foundations, students will engage in discussions of contemporary issues and debates related to science and technology.

교과목표

The primary objective of this course is to enable students to develop a solid understanding of the characteristics of modern science and technology and to critically examine their social implications. Throughout the course, students will engage in critical reflection on modern science and technology using diverse perspectives and theoretical frameworks from the humanities and social sciences. Students will also develop the ability to articulate and communicate their own informed views effectively on contemporary issues related to science and technology.

학습윤리

Failure to satisfy the minimum attendance requirement or any form of academic misconduct, including plagiarism, may result in a final grade of F, regardless of performance on examinations or course assignments.

교과정책(방침)

The course is designed for both Korean and international students and is conducted primarily in English. While course materials and lectures are provided mainly in English, the use of English and Korean in lectures, discussions, and question-and-answer sessions may be adjusted according to the linguistic backgrounds and needs of the enrolled students.
