

영어 문학 텍스트 : 주제적 접근 읽기 (HSS213-01)

학기	2026년 2학기
담당교수	이정아
이수구분	교선평수
학점	3.0
강의시간	월10:30-12:00(E7 - L30), 수10:30-12:00(E7 - L30)
강의실	E7 216 (교수실)
소속	기초학부

교과개요

The theme of this course for Fall 2026 is Science, Technology, and Society. The course has two main objectives: (1) to improve students' English language skills and (2) to explore the socio-political implications of science and technology through reading and discussing science fiction in English. From a language-learning perspective, the course is grounded in the view of language as a social practice. Rather than studying English in isolation, students will engage with literary texts that present authentic social situations, conflicts, and perspectives. Through reading, discussion, and writing, students will develop their ability to understand and use English in meaningful contexts. In terms of content, science fiction provides a valuable lens through which to examine the relationship between science, technology, and society. By imagining technologically advanced futures, science fiction invites readers to reflect on the social, political, and economic consequences of scientific and technological change. Throughout the semester, students will critically examine these issues while considering their own future roles as scientists and engineers. Students will read three to four science fiction texts: one short story and two to three novelettes or novels. The texts will be selected by students from a shortlist during the first week of the semester.

교과목표

<Language Aspects> □Cultivate authentic long-text reading by reading literary texts in English for pleasure and meaning. □Enhance vocabulary power and sentential and discursal understanding through increased exposure to vocabulary and sentence structures used in real life. □Develop English presentation skills by preparing a presentation in English on a given part of a text. □Develop academic English writing skills by writing a source-based essay in English on a self-selected topic related to 'Science & Technology and Society'. <Content aspect> □Understand the relationship between science fiction and science and technology. □Identify the technological advances needed to make the futures projected in science fiction possible and examine the current state of those technologies. □Critically examine the role of science and technology in social, political, and economic aspects. □Reflect on one's own role as a future scientist/engineer with a focus on the socio-political dimension of science and technology. <Class Culture of Learning> □The instructor and the students together create a free and safe space where everyone can voice an opinion. □It is natural that others' opinions may differ from your own, and being different doesn't mean wrong. □We listen to others carefully and exchange constructive and genuine feedback with each other

주차별 강의계획

- 1주차:- Overview of the course- Student Survey / Grouping /Text selection
- 2주차:- Ways to engage in literature - The future that I imagine- AI & Writing
- 3주차:- Intro to Science Fiction- Short Story Unit (Student-selected text)
- 4주차:Short Story Unit (Student-selected text)Novel/Novelette Unit I (Student-selected text)

5주차:Novel/Novelette Unit I (Student-selected text)
 6주차:Novel/Novelette Unit I (Student-selected text)
 7주차:Novel/Novelette Unit I (Student-selected text)* Monday, Oct. 5 - No class meeting (Substitute Holiday for National Foundation Day)
 8주차:-Midterm Period – No Scheduled Classes
 9주차:Novel/Novelette Unit II (Student-selected text)
 10주차:Novel/Novelette Unit II (Student-selected text)
 11주차:Novel/Novelette Unit II (Student-selected text)
 12주차:Novel/Novelette Unit III (Student-selected text)
 13주차:Novel/Novelette Unit III (Student-selected text)Essay Writing fundamentals 1
 14주차:Novel/Novelette Unit III (Student-selected text)Essay Writing fundamentals 2
 15주차:Essay Writing Workshop5 min Essay Presentation
 16주차:Final Exam Period – No Scheduled Classes* Final Paper Due

수업방법

With the exception of an introduction to the science fiction genre and literary criticism at the beginning of the semester, the instructor won't lecture and the class will be centered around reading and discussing the text in question. In this course, the instructor is not a "knowledge deliverer" but rather a "facilitator who helps in-class discussions and the emergence of collective intelligence". More specifically, the students will read the weekly assigned text before class and write a brief reflection on that section to share with others in class. The class will be organized around group presentations and discussions of relevant parts (including mini-presentations, discussion/debate, speaking/writing in role, and peer teaching). The class medium language is English.

학습윤리

Academic dishonesty of any kind is strictly prohibited and will result in a grade of U/F if caught. Academic dishonesty includes the following: □Attendance-related cheating (such as proxy attendance) □Cheating on assignments and presentations (failure to credit sources, plagiarism, submitting the same assignment to more than one class without prior permission) □Aiding or abetting a classmate in cheating Use of Generative AI Generative AI tools (e.g., ChatGPT, Claude, Gemini) may be used for brainstorming, language support, and revision. However, all submitted work must represent the student's own thinking and analysis. Students are responsible for verifying the accuracy of AI-generated content and must acknowledge substantial AI use in their assignments. Students must include an AI Use Statement in all major assignments, including group presentations and the final essay. The AI Use Statement itself is not graded. However, failure to disclose substantial AI use or intentionally misrepresenting AI use may be considered academic dishonesty.

교과정책(방침)

1. Please note that this class is conducted in English. 2. Students will be reading 3-4 science fiction texts during the semester. ONE short story will be selected by students among the following three options: □Robert Sheckley (1952). "Cost of Living" (will be provided by the instructor) □N. K. Jemisin. (2012). "Valedictorian" (will be provided by the instructor) □Ken Liu. (2012). "The Perfect Match" (will be provided by the instructor). Two or three longer texts will be selected from the following list: □Ted Chiang. (2010). The Lifecycle of Software Objects. Subterranean Press. (ISBN: 9781596063174) (Will be provided by the instructor) □ALLY Condie. (2011). Matched. Penguin Group. (ISBN: 9780142419779) □Hao Jingfang. (2016). Folding Beijing. (Will be provided by the instructor) □Martha Wells. (2017). All Systems Red: The Murder Robot Diaries. (ISBN : 9780765397539) □Cory Doctorow. (2019). Unauthorized Bread. In Radicalized: Four Tales of Our Present Moment (pp. 1–112). Tor Books.
 □Becky Chambers. (2021). A Psalm for The Wild-built. Tordotcom.
