

줄기세포생물학(이) (LS415-01)

학기	2026년 2학기
담당교수	김태완
이수구분	교선평수
학점	3.0
강의시간	월10:30-12:00(E7 - L20), 수10:30-12:00(E7 - L20)
강의실	E4 614 (교수실)
소속	기초학부

교과개요

This course covers essential concepts for understanding what stem cells are, how they are established, and how they are used to study development and diseases. Key topics involve the characterization of diverse stem cells, stem cell epigenetics, cellular reprogramming, and the application of stem cells, such as disease modeling and cell replacement therapy. This course provides a foundation for understanding and engaging with the principles used to study human development and disease using stem cells.

교과목표

Students will learn the basics of stem cell establishment and characterization, and how to use stem cells to understand human development and disease. In addition, it will offer new insights into the development of novel therapeutics for incurable diseases, such as aging-associated neurodegenerative diseases.
