

인공지능 개론(이.공) (MECH307-01)

학기	2026년 2학기
담당교수	문인규
이수구분	교선평수
학점	3.0
강의시간	월10:30-12:00(E5 - 425), 수10:30-12:00(E5 - 425)
강의실	
소속	기초학부

교과개요

Artificial Intelligence is one of the most rapidly evolving subjects within the computing & engineering fields, with a special emphasis on creating intelligent robotic systems or applications. This course explains fundamental concepts of artificial intelligence to students who have no previous knowledge or experience with it.

교과목표

The main goal of this course is to show students how to build intelligent systems drawing on techniques from information-based learning, Bayesian reasoning, nearest neighbor algorithm, regression, neural networks, convolutional neural networks, recurrent neural networks, and evolutionary computation. The principles behind these techniques are explained without resorting to complex mathematics, showing how the various techniques can be implemented for intelligent systems design.

수업방법

Combination of lecturing and discussing

학습윤리

Comply with University education policy.

교과정책(방침)

■ To come to class on time. ■ To refrain from using cell phones during class. ■ To spend an adequate amount of time on the project and the homework each week.
