

열 및 통계 물리(이.공) (PHY201a-01)

학기	2026년 2학기
담당교수	박기성
이수구분	교선평수
학점	3.0
강의시간	화10:30-12:00(E7 - L22), 목10:30-12:00(E7 - L22)
강의실	E2 213 (교수실)
소속	기초학부

교과개요

Thermal and statistical physics deals with systems composed of approximately 10^{23} particles, such as air, water, electrons in metals, and photons from the sun. This course explores macroscopic physical quantities—including temperature, pressure, volume, heat capacity, magnetism, and engine efficiency—and explains them using microscopic principles and probabilistic concepts of statistical physics. We begin with the basic concepts of thermodynamics, such as heat, temperature, and the laws of thermodynamics, and apply them to heat engines and phase transitions. The course also introduces classical and quantum statistics as tools for a deeper understanding of various physical phenomena.
