

양자역학Ⅱ(이,공) (PHY305-01)

학기	2026년 2학기
담당교수	김아람
이수구분	교선평수
학점	3.0
강의시간	월11:00-12:30(E7 - G02), 수11:00-12:30(E7 - G02)
강의실	
소속	기초학부

교과개요

This course covers the more advanced formulation of the quantum mechanics (Feynman path integral and second quantization) and its practical application techniques (perturbation and scattering theory) that can be widely used in general research area

교과목표

Aim to be familiar to use the quantum mechanical formulation for actual physics problems

학습윤리

-Introduction to Quantum Mechanics, D. J. Griffiths -Principles of Quantum Mechanics, R. Shankar -Introductory Quantum Mechanics, R. L. Liboff -A Modern Approach to Quantum Mechanics, J. S. Townsend -Modern Quantum Mechanics, J. J. Sakurai -QUANTUM MECHANICS : concepts and applications, N. Zettilii
