

반도체물성 개론(공)(반) (SM203a-01)

학기	2026년 2학기
담당교수	이상훈
이수구분	심화필수
학점	3.0
강의시간	화11:00-12:30(E7 - L20), 목11:00-12:30(E7 - L20)
강의실	E5 612 (교수실)
소속	반도체공학과

교과개요

This new elective course is an entry-level course for those are interested in the principles of semiconductor devices. The course introduces fundamentals of semiconductor physics and devices. Topics of semiconductor physics include elementary materials science concepts, elemental quantum mechanics, semiconductor in equilibrium, carrier transport phenomena. Topics in semiconductor devices consist of PN junction and PN diode including metal-semiconductor and semiconductor heterojunctions.

교과목표

Understanding the basic principles of semiconductor physics and devices

학습윤리

No distribution of course materials without consent of the instructor. No cheating for all the course activities such as attendance, assignments, and exams.

교과정책(방침)

Attendance is highly recommended. Active participation in the lecture is encouraged.
