

소리와 음악(이,공) (TP203-01)

학기	2026년 2학기
담당교수	이기준
이수구분	심화필수
학점	3.0
강의시간	화16:30-18:00(E7 - 224), 목16:30-18:00(E7 - 224)
강의실	E3 411 (이기준 교수실)
소속	기초학부

교과개요

Sound is a physical phenomenon, while music is a psychological phenomenon. It is amazing how humans have developed a taste for a highly complicated structure of sounds in time-frequency axis and came to call it a 'music'. Even without lyrics, music has power to touch the human emotion. This course aims to look into the transition from sound to music, and give students a new perspective to understand music based on physics, physiology, and psychology.

교과목표

To understand how a time-series data of air pressure (a.k.a. sound) becomes a music. To understand the physical law governing sound generation and propagation, and the psychological law governing music composing and performance. To understand the linkage between nature and human.

수업방법

Mostly lecture and discussion, including quite a few class demonstration

학습윤리

When using AI tools in either homework or project, one should clarify what kind of help he/she got from it.

교과정책(방침)
